

# HeLP GP Trial 2018

Install and initialise  Trial Client.

## Installation Requirements

---

The DCP trial client application is installed on a workstation at the front desk.

A printer is required to be available for printing recruitment sheets.

The application has no special hardware or software requirements.

## Installation

---

Install the application by navigating to the URL below with Internet Explorer.

<http://www.doctorscontrolpanel.com.au/help-trial-client.html>

or Google 'Doctors Control Panel' and use menu Download→HeLP Trial Client.

Click on 'Install' button.

Note: The application is installed to the users clickonce cache and is not available to other users of the workstation. The user will need to be logged in to the machine each day. If the user will not be logged on each day, install a second instance(or third) for other users who log on to the machine, so that there will be at least one user who has the application installed in their profile running on any given day. It is also possible to install the application on other workstations at the front desk, however this is not recommended.

# Setting up Printer

Click on the settings Icon (Gear) top right

Use the Printer Drop Down to select a printer.

Use of Page Setup or Advanced Printer Setup is not required as the default settings should suffice.

Help Trial Client

Printer Settings - used during recruitment

FinePrint

Page Setup
